

NearShore Outsourcing

Software Development & IT Sourcing

Nowadays, information technologies are the basic pillar of economic development. Modern economics of the 21st century depends on their perfect operation. Thanks to them it is perceived by companies as a strategic resource for their business success. Hand in hand with a dynamic development of IT industry come global distribution of consumers and IT service providers. Some use outsourcing to be able to focus on their core business, others to find more cheaper or new resources.

In this regard, the region of Central and Eastern Europe (led by the Czech Republic) keeps getting ahead on the global market of IT outsourcing service providers. Customers, primarily from the West European countries and the USA find here highly qualified and educated IT resources. The Aimtec Company, too, ranges among the significant providers of IT nearshore outsourcing services in this region.

NearShore Outsourcing

Efforts to reduce IT costs are in the background of the interest of businesses from West European countries and the USA to take advantage of Aimtec Company's IT nearshore outsourcing services.

Why Aimtec?

Aimtec with its headquarters in Pilsen, Czech Republic (approx. half hour from the border to Germany) is a stable company with a history of over ten years. It provides IT services for both global and local customers. Our nearshoring expertise covers full portfolio of outsourcing services, including IT consulting, technology research, on site, off-site and off-shore development of both standard and tailored applications and the provision of human resources. We are providing flexible IT resources which can be made available for customers on short or long term basis. Aimtec uses a well-proven methodology of project management and development compliant with the ISO 9001:2000 standards, which is, together with the language skills of all team members, a guarantee for an efficient communication and delivery of performed projects.

Our expertise

During its existence the Aimtec Company has achieved a key position in the region of Central and Eastern Europe as a supplier of business information systems and electronic data interchange systems. - Reporting Services
- (X)HTML, JSP, JavaScript, CSS
- Jasper Reports
- ZPL, CPCL (Zebra print languages)
- .NET
- SAP NetWeaver XI

How do we work?

Delivery models

- Custom software development projects
- Outsourcing of software development
- IT Sourcing

Methodology

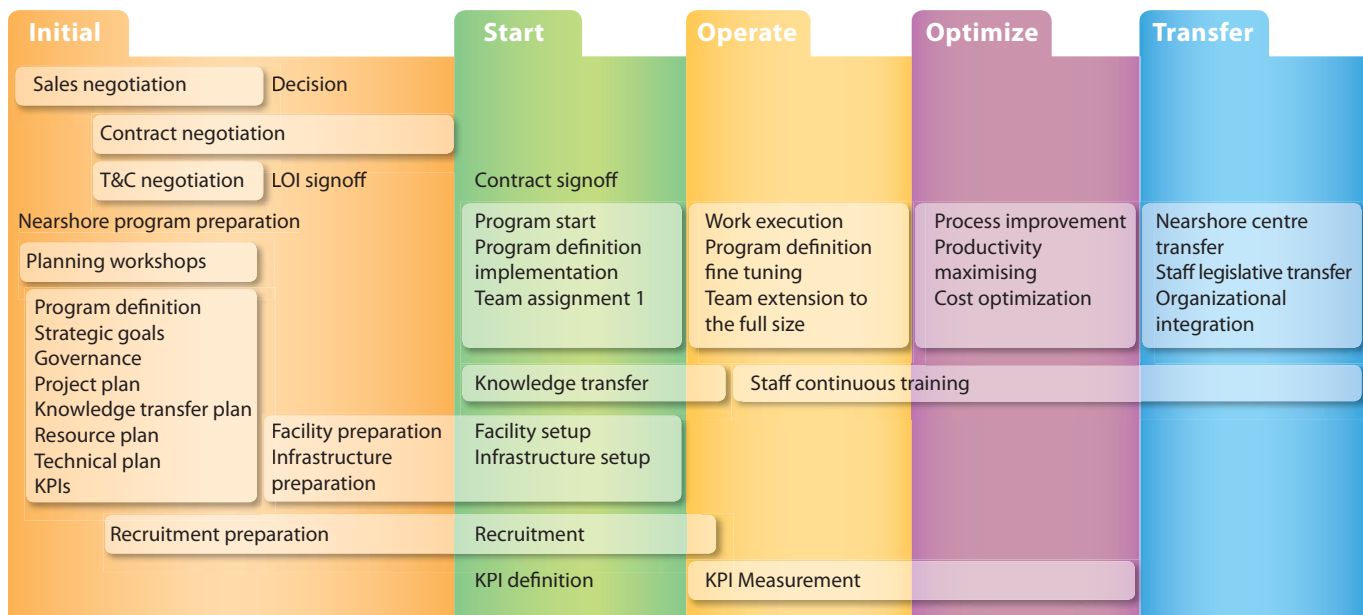

Based on standard development methodologies and our deep knowledge and long term experience with development, implementation and outsourcing projects, we have built up a methodology how to successfully deliver projects in various delivery models. The main goal of the methodology is to deliver services on due dates, in the required quality and within the scope of agreed budget. The methodology covers the whole process of delivery, from business analysis, work breakdown structure (WBS) planning to the handover to customer and the subsequent support.

Upon the development we use the experience in Xtreme Programming (iteration planning, test-driven development and pair programming upon quality control). Whenever iterations are planned, we put the accent on deadlines and capacities, hereby gaining enough data for a possible resolution and escalation of conflicts.

Program management

Service delivery manager covers all the activities starting with program detailed definition, following by the facility, infrastructure and team preparation up to the daily operation, coordination and optimisation. The regular program or project status reports keep client systematically to be informed.

Sales and delivery lifecycle

Aimtec is able to bring large business know-how in such areas

- EDI/EAI (Inovis TrustedLink, Axway (Actis) TradeSync, Influe TradeXpress, Seeburger)
- SAP NetWeaver XI
- ERP Integration (SAP, QAD, Infor, Microsoft, Oracle)
- knowledge of business processes (Automotive, Retail, Logistics, Hi-Tech)
